

## Spring Prep for Lawn & Garden

### Get Maximum Enjoyment from Your Lawn and Garden

#### Prepare your soil for the planting of Spring vegetables:

- Remove weeds and debris.
- Aerate soil for better water and air penetration, and incorporate compost.
- To get a head start, seeds may be started indoors, and then transplanted outside.
- Be nature-friendly by planting wildflowers. Plan your wildflower gardens with hummingbirds and butterflies in mind.

#### Lawn Prep:

- Dethatch, and fertilize.
- Aerate cool season lawns and overseed if necessary.
- Tune up your lawn mower. Properly tuned engines produce fewer emissions, and are more efficient. A sharp blade will cut cleanly without snagging, or damaging the turf. Dull blades can contribute to an unattractive brown appearance that can appear several days after mowing.
- Check irrigation timer to ensure that you are watering early in the morning for best results.
